

## Suzuki SV650 Delkevic link pipe and silencer Kits.

### Packing List:

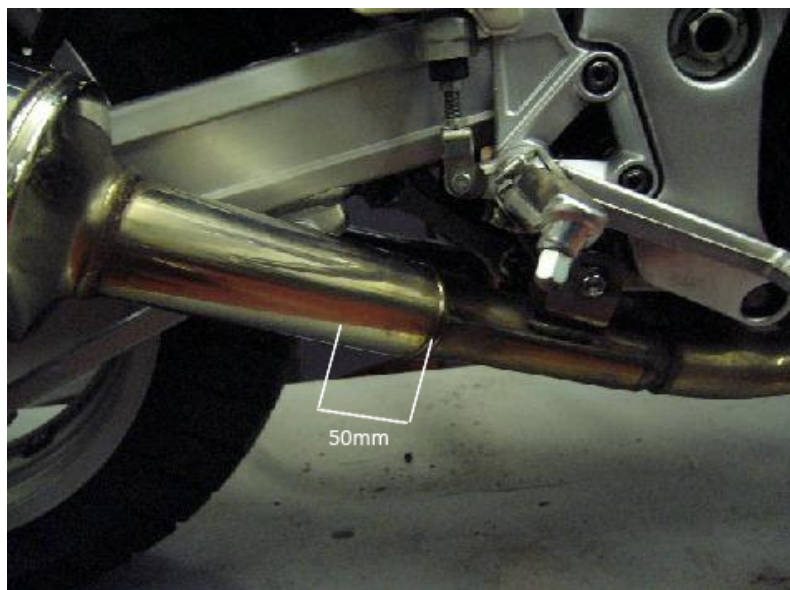

- X 1 Link pipe pr1148
- X 1 Clamp (56-59) pr2066
- X 1 Silencer of choice
- X 1 Silencer strap
- X 1 High temp silicone

### Fitting, Maintenance & Care Instructions:

The SV650 is factory fitted with a fully welded exhaust system apart from the front cylinder header & rear cylinder spigot.

This means that in order to fit a replacement silencer it is necessary to cut the original system. Remove the old silencer from the bike and using a hacksaw; a cut should be made 50mm to the rear of the weld under the footrest-see fig 1,

FIG 1

**The Delkevic link pipe and silencer can now be fitted to the original downpipe (use a sealant on joints if required).**

**In order to achieve correct alignment of the silencer, it may be necessary to rotate the link pipe slightly.**

**As all Delkevic systems are tested and developed on the latest Dynojet equipment no jetting changes should be required.**

**Stainless Steel exhaust systems will discolour with heat, but this does not affect the corrosion resistance of the surfaces.**

**Road dirt and grime should be removed using soapy water and a sponge.**
